Robert Redford Charles Robert Redford Jr. (born August 18, 1936) is an American actor, director, producer and businessman. Founder of the Sundance Film Festival. Redford began acting on television in the late 1950s, including an appearance on the Twilight zone in 1962. He received an Emmy nomination for Best Supporting Actor for his role in The Voice of Charlie Pontus (1962). His greatest Broadway success was as the sweltering husband of the newlywed character co-star Elizabeth Ashley in Neil Simon's Barefoot in the Park (1963). Redford made his film debut in War Hunt (1962). His role in Inside Daisy Clover (1965) won the Golden Globe for Best New Star. He starred alongside Paul Newman in Butch Cassidy and the Sundance Kid (1969), which was a huge success and made him a major star. He had a critical and box-office hit with Jeremiah Johnson (1972), and in 1973 he had the biggest hit of his career, the blockbuster crime caper The Sting, an alliance with Paul Newman for which he was nominated for an Academy Award; in the same year, he also starred alongside Barbra Streisand in The Way We Were. The popular and famous film All the President's People (1976) became an iconic film for Redford. In the 1980s, Redford began his career as a director in Ordinary People (1980), which was one of the most critically and publicly acclaimed films of the decade, winning four Oscars, including Best Picture and an Academy Award for Best Director for Redford. He went on to star and starred in Brubaker (1980), and also played a male role in Out of Africa (1985), which was a huge box office success and won seven Oscars, including best film. In 1992, he released his third film as director of The River Runs Through It. In 1995, he received Best Director and Best Picture nominations for The Quiz. In 2002, he received a second Academy Award for Lifetime Achievement. In 2010, he became a Knight of the Legion of Honour. Winner of the BAFTA, Directors Guild of America, Golden Globe and Screen Actors Guild Awards. In April 2014, Time magazine listed Redford as one of the most influential people in the world in its annual Time 100, declaring him The Godfather of indie films. In 2016, he was awarded the Presidential Medal of Freedom. Hello, friends! Is there a way to change the voice in the league of legends to Japanese and the text is still in English? A few years ago it was possible with a patcher, but I do not find. Can you help me? Thank you in advance! Unsurprisingly, many League of Legends players are also big fans of Japanese movies, manga and anime, so to hear that Riot had to finally bring out Japan's server was a great thrill for the community. The delays have been disappointing - especially for Japanese fans - but finally we have the first signs of the project's progress: revealing the Japanese champion and voice over audio files. This release has led to the appearance of a large streams on on like Reddit, and the league's own forums, discussing where to get audio files and how to install them, but with these forums taking a lot of these guides down we thought it was our civic duty to help fans. For other languages: web website allows you to download a customer who simply lets you change your voices and ads. If you want any language other than Japanese, then go for it. However, since the Japanese server is not yet officially launched, you will have to do things a longer way at the moment. Sorry Amumu - must be patient! 1. Installing Japanese in-game voice packs To install files on your PC or Mac you need to first download them, which you can make safely from these links: Champions: Voice Overs: you will also need a Woxy program available for free here: For Woxy to work and install audio correctly you will need to unpack the downloaded files. First we unpack the JAP_VO.zip file, which you can download above. Once unzipped, you are looking for .bnk files and .wpk files. They are located in a folder called managed files. Once this is done, you will need to go to Woxy and start the installation process. First we have to show Woxy where .bnk and .wpk files are in our system. - To choose them, you need to press the SKINS button, then import SKINS. This may sound strange, but it's a correct-hint to appear asking you to add files, so click the files mentioned earlier.- Once they've all chosen Woxy will make one new master file and then it will install a said file for your League of Legends client. 2. The Japanese voice pack for Champion Select Champion Select Lobby will not change in Japanese after using Woxy, but all champion votes and in-game ads will be. Champion pick requires a little extra tinkering, but don't worry, it's pretty easy. Go to the LoL folder (usually located in the C: Riot Games League of Legends folder) and follow this path: RADSprojectlol_air_client releases0.x.xx\deploy\employers\sounds X.xx will be a folder with the latest date, which is your current client version of League of Legends. Now follow these steps: - Find your current locale folder, for example, German players will see de_DE as a folder.- Back up by renaming the folder to something else.- Go to the Japanese folder. Copy the files and insert them into a new folder with the original name (de_DE for German players again). The LoL client will use the new files, thinking they are part of the original folder. If this isn't Bluff Achieved, you may need to set up file names in your folder, not just the name of the folder. You can follow a handy video for the whole process too, created by Redditer Bogan666, who created this installation guide: 3. Installation (not checked by us, please be careful by following Steps): Computers are different from PCs in many ways, but in this case the path for files and folders is a problem. The route for your Mac folders should look like this: /Apps/League of Legends.app/Contents/LoL/RADS/projects/lol_game_client_en_us What was previously mentioned has a deletion process. It is recommended that Mac users install this and make a backup of the files that need to be replaced so that this software can return you to its original state. For a installation guide you can follow this video from Redditer vkbluestar, which must be credited to find out the correct process for Macs: Region codes: Below are regional codes for gaming customers of each area to help with identifying the folders you will need to edit. North America - 0.0.1.20Europe - 0.0.1.4Orcionia - 0.0.0.124Mac - 0.0.0.0.181LAN - 0.0.0.134Brazil - 0.0.0.0.182Corea - 0.0.0.129PBE - 0.0.3.87Mac PBE - 0.0.2.145. Once again, credit to Reddit users bogan666, for the original guide structure, and for users of ya_breath and vkbluestar who have provided a text and video guide for those users on Macs. You can stay up to date with the latest news and interviews from Team Dignitas by following us on our Facebook and our (now verified) Twitter pages. Make sure to watch our new North American LCS team in action as Spring Split 2016 gets underway! The popular online multiplayer game Riot Games League of Legends was first brought to Japan with a beta version in 2016. With an ever-growing player base and reach, many fans want to change the language in their client. However, the only languages currently available on the client - for most - consists of English, Deutsch, Espa'ol, France, and Italiano. The release of the new League of Legends launcher has changed the way your customer's audio and text change into Japanese. However, this requires only a few simple steps. Go to the League of Legends go to: This PC is a local drive (C:) Or right, click on your League of Legends Click Properties client and select the Open File Location. Right click LeagueClient.exe' Click Create a Shortcut Users must create a shortcut using the steps above drag shortcut to the desktop Add Japanese to the label: Right click on the newly created League of Legends label Go to the Purpose Field where it should say: C: Riot Games League Legend, LeagueClient. Add two spaces at the end of the text line then copy and paste: Click Apply and then click OK. After the next steps above, the newly created Shortcut will launch the League of Legends in Japanese. Almost everything, including text, voices, and game chat and audio, will be changed. However, players will still be on the servers of their region with the same ping play without Users can also return to their original launcher to return to English. Often Often question and strongly requested fan feature the ability to change either only the audio or text of the League of Legends client. Unfortunately, only changing the whole customer language works - at the moment.
